TIME TO CARE: “THE SPIRIT OF INNOVATION & SUSTAINABILITY”

Responsibly meeting the needs of the present – and ensuring that future generations will be able to meet theirs – requires innovative thinking on an unprecedented scale.

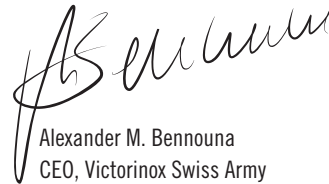

Innovation is a core value of Victorinox Swiss Army. It governs every aspect of our activity, from how we design and manufacture our products to how we operate our facilities. The brand has a long heritage of environmental responsibility. A pioneer in energy-conservation and recycling, it ensures that every step in the value chain is oriented towards sustainability: from manufacturing to selection of materials, packaging and shipping.

In today's world of depleting resources and climate change, the need to foster sustainable practices is more urgent than ever. This is why Victorinox Swiss Army is introducing Time to Care, a unique project inspiring, stimulating and supporting innovative, responsible, and sustainable design.

Victorinox Swiss Army is undertaking this initiative to draw attention to the important work of some of the world's most sustainable innovators, and provide a platform for young innovators to develop new ideas for sustainability.

In 2011, we invite you to join us in promoting ecological commitment and become part of Victorinox Swiss Army's efforts in making the future more sustainable.

Sincerely,

Alexander M. Bennouna
CEO, Victorinox Swiss Army

MILESTONES

1884

Karl Elsener opens a cutlery workshop in Ibach-Schwyz with the support of his mother Victoria.

1891

Initiated by Karl Elsener, the Swiss Cutlery Union is founded. Karl Elsener and his co-workers deliver soldier's knives to the Swiss Army for the first time.

1897

The name "Swiss Officer's and Sport Knife" is legally protected on June 12. This model later becomes known around the world as the "Original Swiss Army Knife".

1909

Following the death of his mother, Karl Elsener introduces the brand name "Victoria" in her honor. The company's founder legally registers the distinctive emblem with the cross and shield as a trademark. It is now a registered trademark in more than 120 countries.

1921

The invention of stainless steel being of central importance for the cutlery industry, Karl Elsener coins the company's new name, "Victorinox" by combining his mother's name "Victoria" with "inox". (Inox is an abbreviation of the French word "inoxydable", which means stainless).

1931

The Brown Boveri Company sets up the world's first fully electric heat treatment facility for Victorinox.

1945

The "Original Swiss Army Knife" begins its successful progression around the world and is particularly popular in US Army PX stores.

1979

On January 2, the previously solely-owned "Messerfabrik Carl Elsener" is converted to the family-owned company "Victorinox AG".

1984

The company doubles the size of its plant and office space with 810 employees generating revenue of more than CHF 80 million.

1989

Victorinox's American distribution partner enters the timepiece market in the USA under the "Swiss Army Brands, Inc." label.

1992

The company opens its own sales subsidiary in Japan. Further subsidiaries follow in subsequent years.

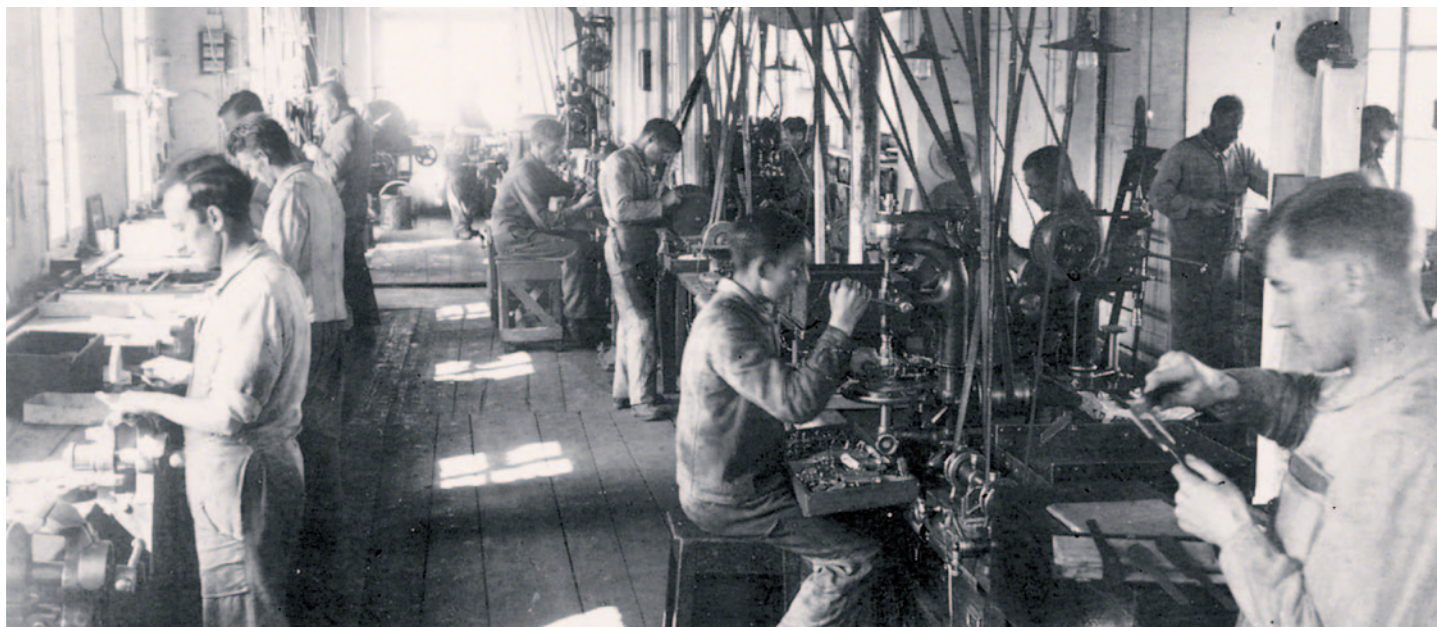

1999

Victorinox enters the travel gear market, issuing a manufacturing license to the American TRG Group in St. Louis.

Expanding its timepiece business, the company establishes Victorinox Watch SA in Bonfol, in Switzerland's Jura watch-making region.

2000

The Victorinox Foundation is set up. It holds 85% of the shares in Victorinox AG. A further 15% are held by the charitable Carl and Elise Elsener-Gut Foundation.

2001

Victorinox apparel is introduced in the USA. The first Victorinox Flagship store opens its doors to the public in New York's trendy Soho district.

2002

The publicly traded US distribution partner Swiss Army Brands Inc. is privatized. The timepiece brand Victorinox Swiss Army is launched internationally.

2003

Victorinox takes over the US-American company Wenger NA, including the fragrance label "Swiss Army Fragrance".

2005

Victorinox takes over the traditional Swiss cutlery and watch manufacturer Wenger SA in Delémont in the Swiss Jura.

2006

Victorinox Swiss Army moves to its new watch production facility in Porrentruy, in the Swiss Jura, to meet the increasing demand and to ensure high-quality timepieces.

2007

Victorinox sets up Victorinox Swiss Army Fragrance AG based at its head office. The former Wenger fragrance line is repositioned in the market and is branded with the Victorinox emblem.

2008

The company's first European Flagship store opens on London's New Bond Street.

2009

Geneva City hosts first Victorinox Flagship store in Switzerland. 125 years after its foundation, Victorinox now employs more than 1800 employees worldwide and generates revenues of around CHF 500 million.

2011

The success story continues, opening the Flagship store in Düsseldorf.

VICTORINOX SWISS ARMY CORE VALUES

Each Victorinox Swiss Army timepiece embodies the spirit of the legendary Original Swiss Army Knife, a universal symbol of functionality, innovation, quality and iconic design.

FUNCTIONALITY

Each Victorinox Swiss Army timepiece is designed to optimize its usefulness. Functionality ranges from easy-to-read dial designs to sophisticated professional functions. Every design detail is purpose-based. Functions are never add-ons or embellishments. The goal is to create watches that are timeless.

INNOVATION

Victorinox Swiss Army constantly enhances its timepiece lines with new design elements and innovative functions while seeking creative ways of upgrading existing components to enhance their capabilities.

QUALITY

Victorinox Swiss Army timepieces are designed and manufactured with the same rigorous attention to quality as the brand's legendary Pocket Tools. They also meet the highest standards of the Swiss watchmaking industry. The quality controls and testing that every timepiece undergoes (material, movement, assembly, finishing, etc.) allow Victorinox Swiss Army to offer a 3-year limited warranty.

ICONIC DESIGN

The Original Swiss Army Knife is one of the world's most functional pieces of design. Victorinox Swiss Army timepieces share this icon's spirit and heritage. They are multi-functional precision instruments engineered to last, yet also timeless and contemporary in design.

VICTORINOX SWISS ARMY MATERIALS & COMPONENTS

Victorinox Swiss Army sources the best materials for its Swiss-made timepieces. Robustness, durability and quality are the key requisites.

MOVEMENTS

Victorinox Swiss Army equips its timepieces with Swiss-made precision mechanical and quartz movements. These are sourced from the best manufacturers in Switzerland:

ETA — Over 200 years of experience in quality movement manufacturing. Equips mainly our mechanical timepieces (Valjoux, Valgranges, Unitas) and some of our quartz chronographs;

Ronda — Progressive new movement features and responsive to customer needs. Used mainly in our 3-hand quartz watches.

Exclusive mechanisms are also developed with renowned partners for special mechanical timepieces. In addition Victorinox Swiss Army integrates exclusive Swiss-developed and Swiss-made electronic modules to power timepieces like the Night Vision II and the ST-5000.

STAINLESS STEEL

The 316L stainless steel alloy used in Victorinox Swiss Army cases and bracelets has strong anti-magnetic properties and is optimized for toughness and corrosion resistance. It is also a good choice for consumers allergic to nickel.

TITANIUM

Victorinox Swiss Army integrates this metal to some of its sports timepieces, as it is as strong as steel but 45% lighter and highly resistant to corrosion. The high tensile strength to density ratio makes it the ideal material for active lifestyles.

PVD

Victorinox Swiss Army uses PVD coatings and was one of the first watchmaking brands to apply the “Black Ice” PVD treatment color, setting a trend in the industry since then.

PVD, a high-performance pollution-free and non-allergenic technology also used in the aeronautic industry, is widely used in watchmaking. The process involves putting a fine titanium coating on stainless steel by condensing a metal vapor in a partial vacuum, not through electrolytic or chemical processes.

Victorinox Swiss Army also employs a special process for its timepieces with gold accents: a thin layer of gold powder is added after treating the surface with PVD. This process provides a longer-lasting finish versus conventional plating.

SAPPHIRE VS MINERAL CRYSTALS

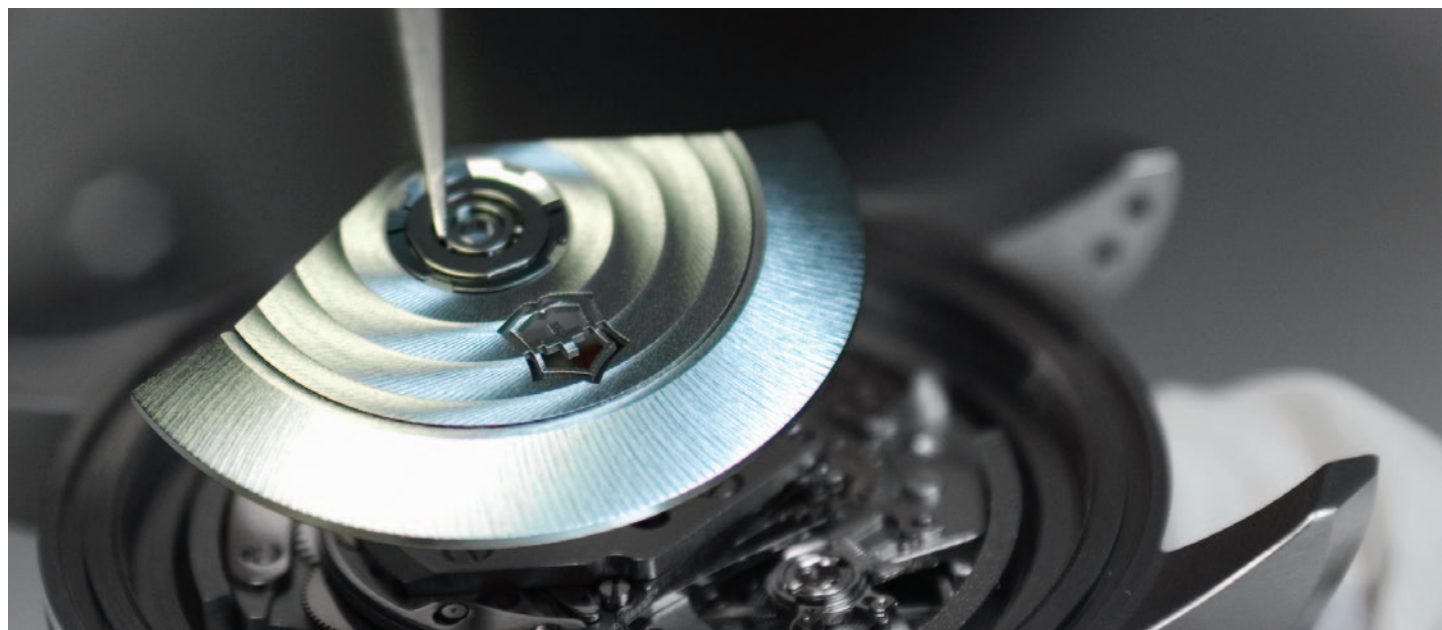

Ninety-five percent of Victorinox Swiss Army watches are fitted with a scratch-resistant crystal that has been cut from a polished slice of solid sapphire. Each has a triple-coated anti-reflective treatment on the internal side for better legibility. On the other hand some timepieces are equipped with a mineral glass which offers a better shock-resistance.

LUMINESCENCE

This technology, branded under the name Super-Luminova®, offers brightness in low-light conditions, thanks to a non-radioactive and non-toxic material like the tritium previously employed in the industry. Victorinox Swiss Army uses Super-Luminova® for its highly functional attributes. It is applied on watch parts such as hands, numerals, bezel markers, etc.

MOTHER-OF-PEARL

Resilient, and iridescent, mother-of-pearl is integrated in many Victorinox Swiss Army dial designs. It is produced inside the shells of certain mollusk. This is why each dial made of mother-of-pearl is unique.

LEATHER

All Victorinox Swiss Army leather straps are specially cut, stitched and padded by expert craftspeople. Various ways of tanning provide different touch and feel for the straps made of cow or calf leather. For some models Victorinox Swiss Army uses vegetable tanned leather straps giving a soft touch and upgraded comfort to its owner. We also make sure that the leather of all our straps do not come from any endangered species. It is always important to remember that colors and suppleness of leather are subject to change with time and exposure to external factors. Daily showers or swims are not recommended. If your consumers live a very active lifestyle, especially one involving frequent exposure to salt water and heavy perspiration, we recommend a steel bracelet or rubber strap.

RUBBER

Victorinox Swiss Army uses genuine high-grade rubber for its straps (a natural material and extremely comfortable). The rubber is silky finished and easy to maintain with the proper cleaning.

DIAMONDS

For Victorinox Swiss Army jewelry models, diamonds are carefully selected and matched not just according to carat value but also to cut, color and clarity. To this famous “4C” approach of characterizing diamonds – an industry standard in the field of gemology for more than 100 years – Victorinox Swiss Army adds a fifth C: “cost”. The goal is to pass on to our customers the best quality at the best price. Equally important is the diamond’s history: all diamonds are purchased from legitimate sources not involved in funding conflict and in compliance with United Nations resolutions. We guarantee that these diamonds are conflict free.

BATTERIES

In compliance with global regulations and standards, Victorinox Swiss Army equips its quartz timepieces with mercury-free batteries. This is a positive step towards environmental sustainability with no effect on the watch precision and its efficiency.

VICTORINOX SWISS ARMY FINISHING

Depending on the timepiece and the aesthetic effect desired, Victorinox Swiss Army utilizes polished, brushed, satin, or grinded finishes. Polishing gives sparkle and shine to the metal, which is further enhanced by a final hand buffing. Surfaces catch the light and the watch’s contours are highlighted. Fine brushing and satin produce a silky finish with subtle tones. It is ideal for watches that will be worn everyday as they are less susceptible to visible scratches.

Even less prone to scratches, grinding finishes are mainly used for elite timepieces in the industry. For Victorinox Swiss Army, this is mainly done for timepieces in the Professional line.

On some models Victorinox Swiss Army stainless steel is enhanced with highly aesthetic finishing such as the signature *Black Ice* PVD treatment.

Victorinox Swiss Army applies *guilloché*, *azurage* and other highly aesthetic finishing on dials (applied numbers, diamond cut, angled flange, levels, etc.). Moreover, movements and casebacks are either specially decorated or engraved individually.

VICTORINOX SWISS ARMY QUALITY

Victorinox Swiss Army timepieces are covered by a 3-year limited warranty, which is a longer period of coverage than what many top watch brands offer. The reason we can offer this extended warranty is because of the confidence we have in our Quality Team and the processes that exist. Victorinox Swiss Army timepieces go through rigorous testing and several quality controls before being distributed.

The Quality Team and its equipment used fully comply with European ISO standards and Federation of the Swiss Watch Industry standards (NIHS). It also has its own standards and internal tests. In each production phase, quality “filters” – specific members of the Quality Team – control each step. Their extensive certification controls continue to monitor delivery. Victorinox Swiss Army also certifies each component brought in from outside suppliers. The Victorinox Swiss Army Quality Team conducts roughly 50 tests before certifying a watch. Here is a list of the most important tests Victorinox Swiss Army timepieces undergo.

CONFORMITY

Every component coming into our production facility in Porrentruy in the Swiss Jura is checked to ensure its dimensions, aesthetics, quality and interchangeability. This process is ensured thanks to an internal Development Team that engineers the various components. All this occurs even before their production, therefore allowing integrated process from the start.

MECHANICAL MOVEMENT

A mechanical movement undergoes several stresses in its life. To ensure it will remain functional and precise as long as possible, Victorinox Swiss Army simulates watch wearing in its own quality office for every single manual and self-winding mechanism.

WATER RESISTANCE

Victorinox Swiss Army watch cases are hermetically sealed using high-grade rubber gaskets and screwed-in casebacks to ensure that no moisture or dust comes in contact with the movement inside. The Quality Team carries out individual and real-time water-resistance and water-pressure tests to 100 meters on most of its watches, which is the brand’s water resistance standard. Special 500-meter water resistance testing equipment is used for the famous Dive Master 500 watches.

TEMPERATURE RESISTANCE

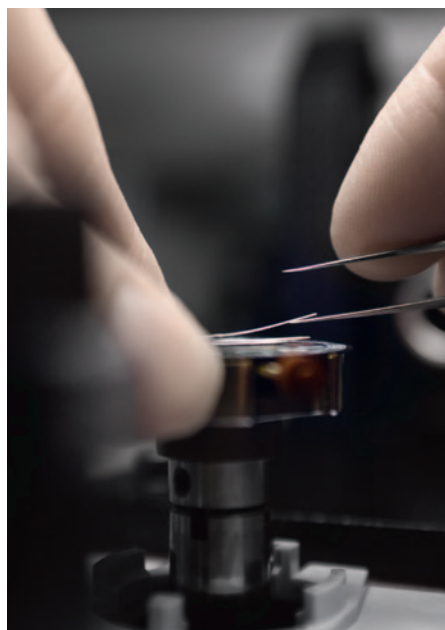

Heat chamber and humidity tests are performed on Victorinox Swiss Army watches to ensure perfect operation in the tropics. It also subjects each to negative temperatures, to be sure that the watch, especially the mechanism, can withstand the climatic conditions encountered during winter sports.

CORROSION RESISTANCE

Perspiration, chlorine, soap, seawater, air pollution – these and other environmental elements can damage timepiece components and materials. Victorinox Swiss Army performs a number of tests to ensure parts do not wear or lose mobility because of exposure to corrosive elements. Neutrality tests are also done on parts coming in contact with the skin, including cases, stainless steel bracelets, leather straps, etc.

U-V RESISTANCE

Intense light can age many materials used in timepieces, such as coatings, plastics, rubber and leather. Rigorous testing is done to ensure the durability of these materials. For a material to be certified by the Quality Team, no signs of aging must occur during testing under intense light.

TRACTION/TORSION RESISTANCE

The buckle on a leather strap and the clasp on steel bracelet undergo constant use during the life of a timepiece. Victorinox Swiss Army submits complete timepieces to traction and torsion tests while special attention is paid to attachment pins to ensure that accidental snagging will not bend or weaken them.

VIBRATION RESISTANCE

Everyday wrist movements – and sporting activities like bike, jogging, riding, and skiing – can affect the performance, quality and accuracy of a watch. To prevent this, special machines put Victorinox Swiss Army timepieces through more severe vibration than it would ever experience on even the most active wrist. If the watch or its components do not withstand the intense ordeal, the watch will not pass certification.

SHOCK RESISTANCE

A number of severe shock tests are executed on Victorinox Swiss Army watches. Heavy impacts are reproduced in the lab – the equivalent of severe impact with a wall, for example. The appropriate instruments later check that no mechanical damage occurred during these tests.

AGE RESISTANCE

Victorinox Swiss Army watches are function-tested to simulate the aging process – moving parts such as pushbuttons, crowns and bezels are turned and manipulated in a manner that reflects the equivalent of several years of normal use.

ABRASION RESISTANCE

The Quality Team does intensive abrasion studies, especially on its cases, bracelets and straps, to ensure that the timepieces can be worn in all situations and not worn out during their active life.

VISUAL AND MANUAL TESTING

In addition to this testing process, all timepieces are visually checked by a member of the Quality Team between each manufacturing step ensuring overall quality based on our own Victorinox Swiss Army standards. If a timepiece does not pass inspection, it is checked and repaired. It can only go back to the production phase if it has passed the quality check.

COLLECTORS' ITEMS

UNIQUE MOMENTS

VICTORINOX
SWISS ARMY

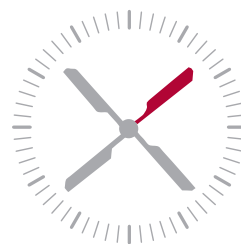

ALPNACH

The Alpnach Collection is named after the famous alpine helicopter base of the Swiss Air Force. The line's signature construction is inspired by the Force's twin-rotor Cougar AS 532 helicopter, a versatile utility aircraft operational in even the most extreme weather conditions.

The newest member of the Alpnach force, the ALPNACH *MECHANICAL CHRONOGRAPH SPECIAL EDITION*, stands out for its extremely graphic and angular design. Solidly built and reliable, it provides exceptional levels of technicality and

performance. The three diamond-cut sub-counters on the easy-read dial look like those found in a Cougar cockpit. The crown and countdown bezel are modeled on the helicopter's turbines, the anatomical reset pusher at 4 o'clock is inspired by the helicopter cycle stick, and the small seconds counter at 9 o'clock, which is accurate to $\frac{1}{4}$ of a second, echoes the Cougar helicopter's 4-bladed rotor. The mechanical movement and its day/date complications are visible through a unique caseback aperture. The super-tough strap is constructed of the same technical fabric used in some Victorinox's Travel Gear.

ALPNACH MECHANICAL CHRONOGRAPH SPECIAL EDITION

Swiss Made

Solid stainless steel case (316L)

Unidirectional rotating bezel with countdown scale

Black Ice PVD on case, crown and pushers

Caseback partially transparent with screws

Water resistant to 100 m (10 ATM, 330 ft)

Scratch-resistant, triple-coated anti-reflective sapphire crystal

Luminescent hands

Day and date calendar

High-tech fabric strap

Chronograph functions

60-second, 30-minute and 12-hour counters

Tachymeter scale

241530

ALPNACH MECHANICAL CHRONOGRAPH SPECIAL EDITION

Mechanical self-winding chronograph movement (Valjoux 7750) with day and date

Decoration on the *Black PVD* oscillating weight

Ø 44 mm

Each timepiece is presented in an exclusive packaging.

AIRBOSS

THE AIR BOSS

Known as the “Air Boss”, this navy air officer is responsible for all aspects of operations of the carrier's flight deck involving aircrafts, including the hangar deck, flight deck, and airborne aircraft out to 5 nautical miles from the carrier. From his perch in the tower, he monitors the operation of catapults and arresting gear, and directs fire fighting efforts if a crash occurs.

Timing is critical in all these activities while the Air Boss, always under pressure, is the only one giving his approval to landing and launching aircrafts, as well as for moving the planes around.

The Victorinox Swiss Army AirBoss collection has been thought and designed in the spirit of this highly professional activity, where extreme precision is as important as right decisions at the right moment.

The AirBoss watch collection pays tribute to the Air Boss, this central figure of the Navy, with aviation-inspired timepieces which feature a key function: a visual countdown function, based on a bi-directional rotating inner bezel around the dial, allowing the Air Boss to precisely track time between aircraft launches. This very simple to use minute countdown timer is made of a bi-directional rotating inner bezel (0 – 60 minutes) surrounding the dial and set by a specific crown on the right side of the case.

The AirBoss *Mach 8 Special Edition* is equipped with top-level sophisticated mechanical self-winding movement, insuring precision and robustness, while offering an exhibition caseback to view the mechanisms. It also features the same enhanced functionality pioneered by Victorinox Swiss Army by having its movement rotated 180° clockwise, bringing the start/stop chronograph pusher to 8 o'clock for optimal thumb operation.

AIRBOSS MACH 8 SPECIAL EDITION

Swiss Made

Brushed stainless steel case (316L)

Screw-in exhibition caseback

Rotating inner bezel (countdown scale)

Water resistant to 100 m (10 ATM, 330 ft)

Scratch-resistant, triple coated anti-reflective sapphire crystal

Luminescent hands and hour markers

Applied numerals

Soft black leather strap with contrasted stitching

Chronograph functions

60-second, 30-minute and 12-hour counters

The AirBoss series focuses on the highly demanding world of timing in aviation. High above the flight deck, from a 15-by-15 foot eagle's nest, the air boss oversees all launch, landing, and aircraft movements on an aircraft carrier. Tracking, counting down and measuring time are all vital to the many split-second decisions the Air Boss must make in directing the activities on the flight deck.

TELEMETER

This retro-military inspired chronograph offers a function well-known among the artillerists: the telemeter. The function indicates, when using the chronograph, the distance of the enemy by measuring the time between the light and the sound of the canon. It can also be used to measure the distance of an approaching thunderstorm.

ST-5000 *WITH PATHFINDER*

Swiss Made
Lightweight titanium case
Water resistant to 50 m (5 ATM, 165 ft)

Domed shock-resistant, triple-coated anti-reflective hardened mineral crystal
Luminescent hands and numerals

ACTIVE ST-5000 WITH PATHFINDER

24837 ST-5000 WITH PATHFINDER
Quartz
Ø 42 mm

World première timepiece

Key information is conveyed in an extremely practical and easy-to-understand format thanks to the use of LEDs (light emitting diodes) in universally recognised colours:

Green	=	right direction
Orange	=	slight deviation from course
Red	=	wrong direction

Module

Swiss-developed and Swiss-made electronic module invented by Victorinox Swiss Army including a very sensitive magnetic sensor.

How to use in 3 simple steps:

1. Find True North in the Compass Mode

2. Lock your heading

3. Keep your course in the Pathfinder Mode (Where to Go)

○ ○ ● ○ ○	on path (+/- 0-5°)
○ ○ ● ● ○	off path (+/- 5-20°)
● ○ ○ ● ●	off path (+/- 20-40°)
● ○ ○ ● ●	off path (+/- 40-90°)

NIGHT VISION II

Swiss Made
Stainless steel case (316L)
Water resistant to 50 m (5 ATM, 165 ft)

Scratch-resistant, triple-coated anti-reflective sapphire crystal
Luminescent hands and numerals
Battery end-of-life indicator

ACTIVE NIGHT VISION II

241131 NIGHT VISION II
Quartz
Genuine rubber strap
Ø 41 mm

Lighting modes

Swiss developed and Swiss-made low consumption light module with 3 different light sources:

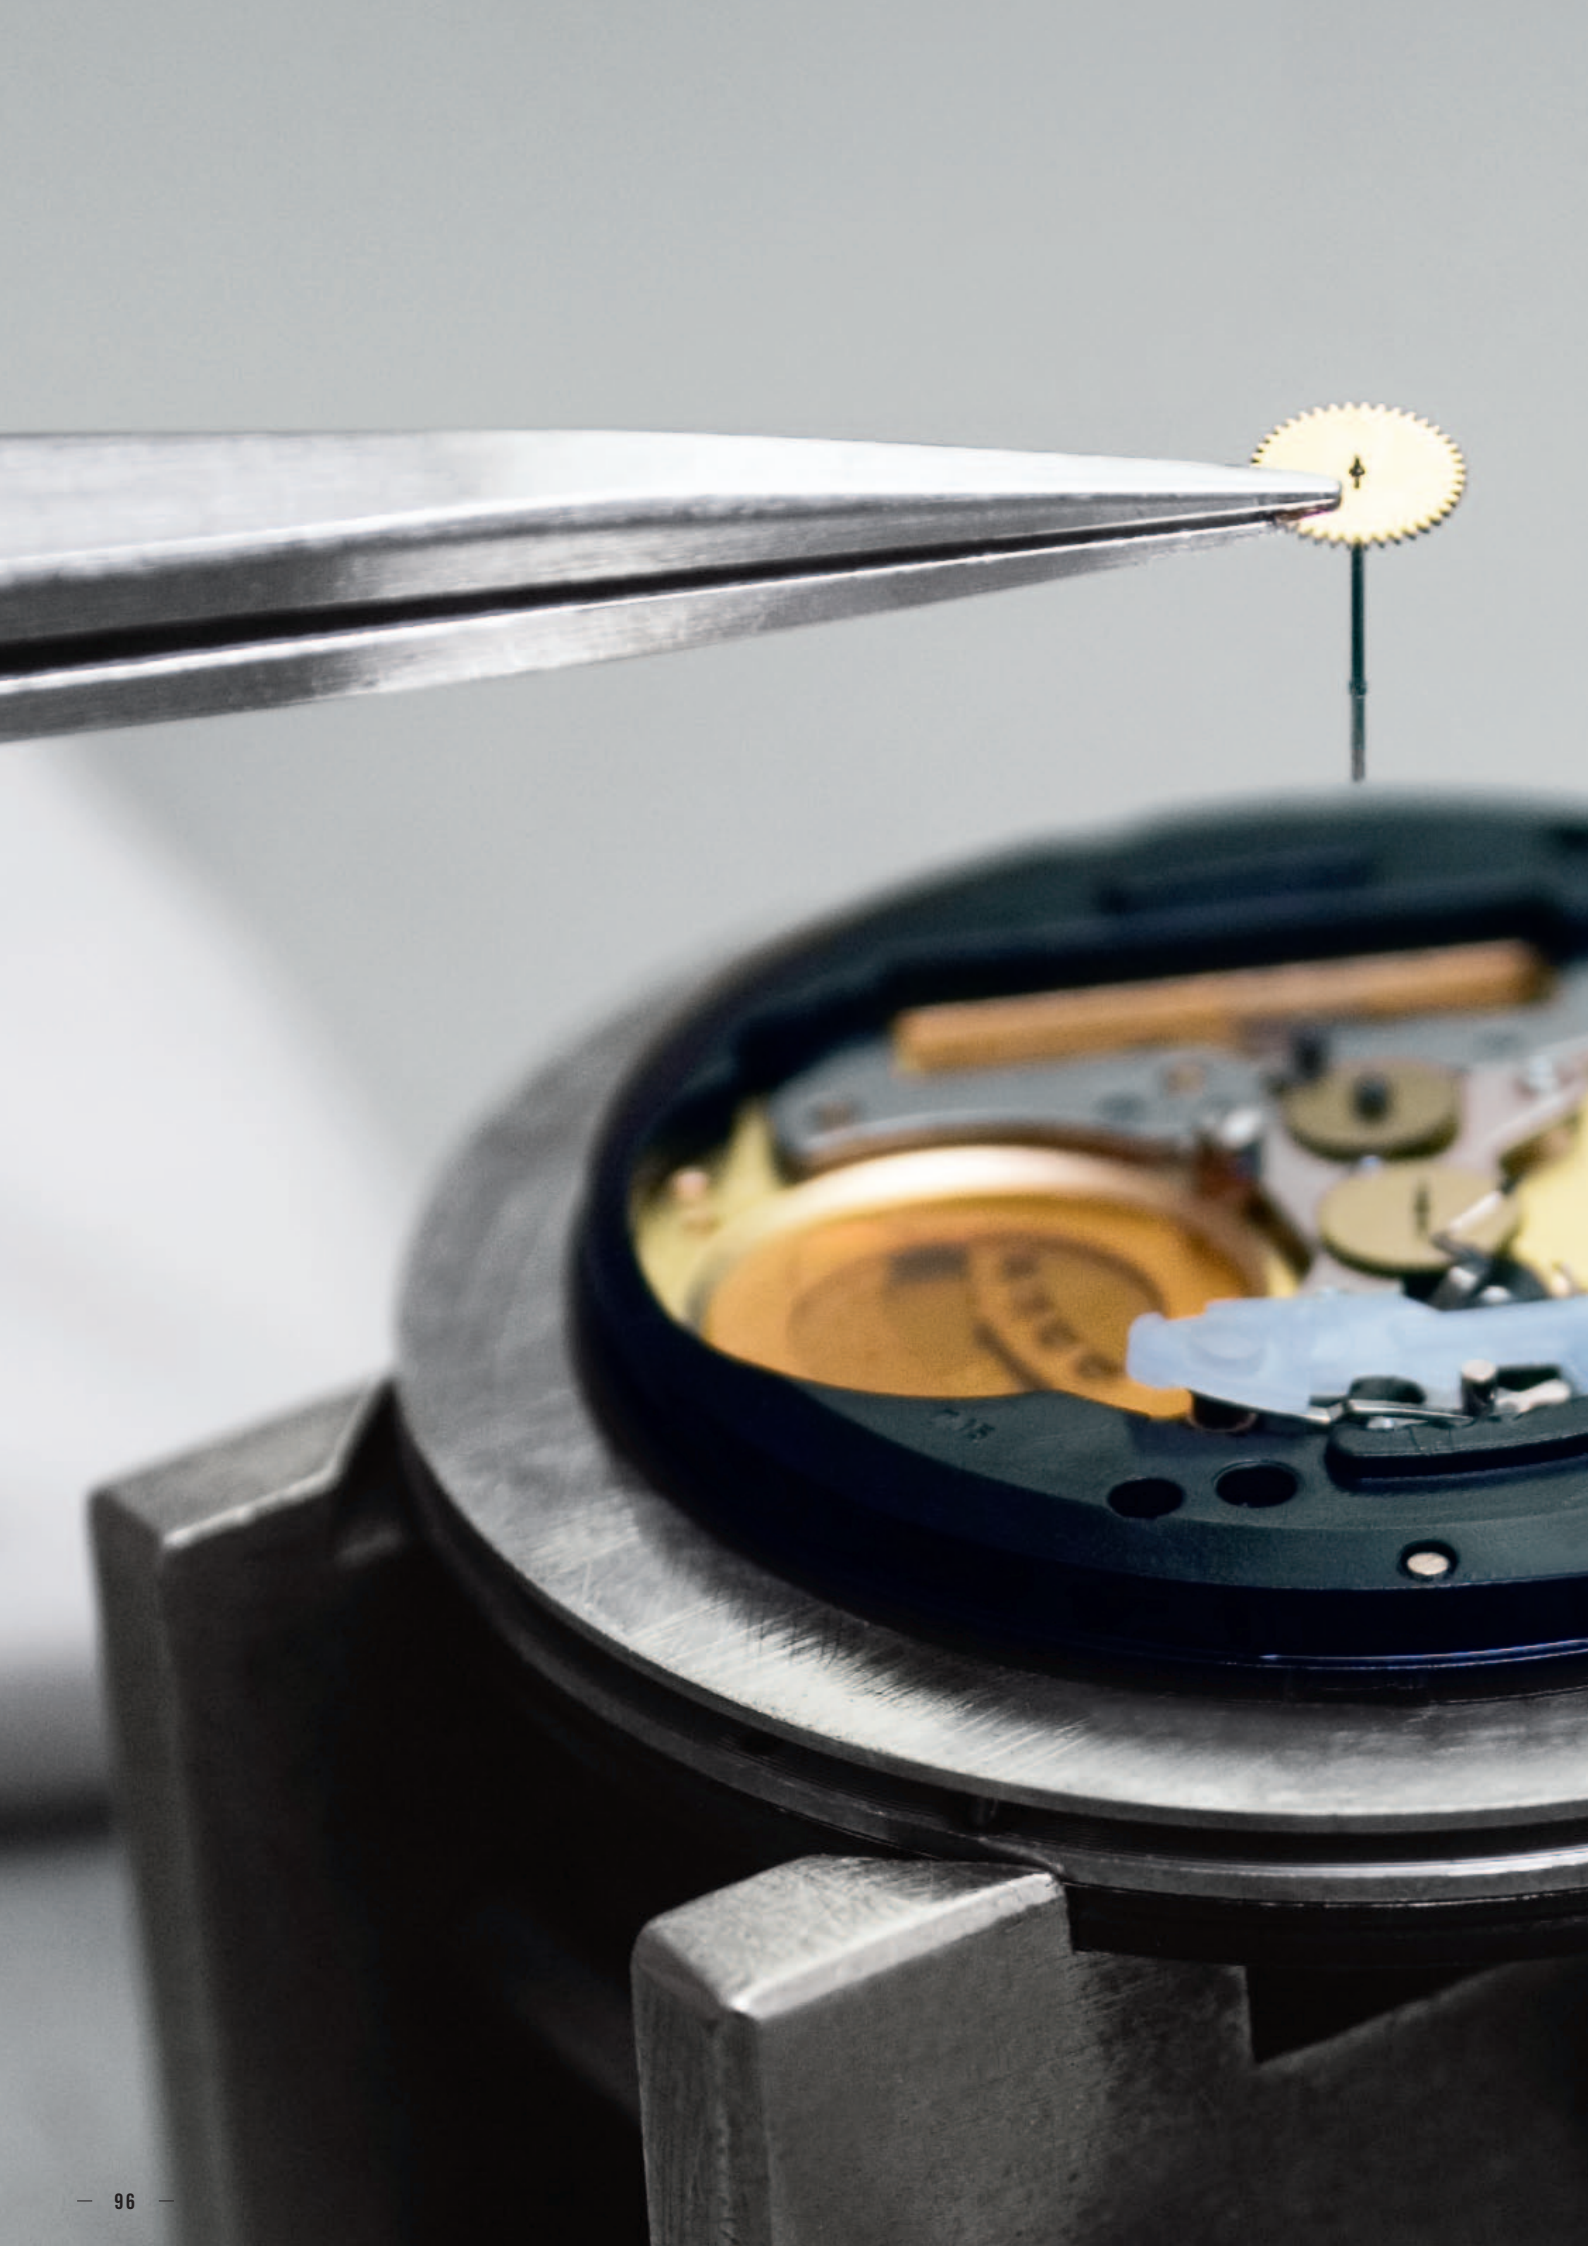

White LED flashlight
(continuous light, signal and
strobe functions)

Blue LED for dial illumination

Red LED for locator and
battery end-of-life indicator
(lighting system)
