COMPANION *FOR LIFE*

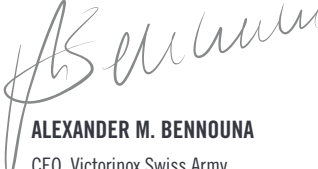

Founded by Karl Elsener in 1884, Victorinox is renowned worldwide for its first creation, the Original Swiss Army Knife. This modest yet worldwide beloved object inspires all the Victorinox product lines, including the Victorinox Swiss Army timepieces.

For 128 years, Victorinox has accompanied people in their life experience, portraying our country's greatest achievements through products that became iconic for ultimate Swiss quality and know-how.

Victorinox Swiss Army timepieces have earned the trust and love of our customers because they do not just seek to meet customer expectations but to exceed them thanks to a careful attention to details. This is why we confidently offer 3-year warranty on all our timepieces.

From functionality to innovation, from iconic design to quality, Victorinox Swiss Army ensures that every timepiece we design, engineer and manufacture, like the Swiss Army Knife that inspired it, turns into a true "companion for life".

ALEXANDER M. BENNOUNA
CEO, Victorinox Swiss Army

HISTORY

THE SPIRIT OF INNOVATION & SUSTAINABILITY

RESPONSIBLY MEETING THE NEEDS OF THE PRESENT – AND ENSURING THAT FUTURE GENERATIONS WILL BE ABLE TO MEET THEIRS – REQUIRES INNOVATIVE THINKING ON AN UNPRECEDENTED SCALE. ROBUSTNESS, DURABILITY AND QUALITY ARE THE KEY REQUISITES.

VICTORINOX WORKSHOP

1943 – IBACH – SWITZERLAND

1884

Karl Elsener opens a cutlery workshop in Ibach-Schwyz with the support of his mother Victoria.

1891

Initiated by Karl Elsener, the Swiss Cutlery Union is founded. Karl Elsener and his co-workers deliver soldier's knives to the Swiss Army for the first time.

1897

The name "Swiss Officer's and Sport Knife" is legally protected on June 12. This model later becomes known around the world as the "Original Swiss Army Knife".

1909

Following the death of his mother, Karl Elsener introduces the brand name "Victoria" in her honor.

The company's founder legally registers the distinctive emblem with the cross and shield as a trademark. It is now a registered trademark in more than 120 countries.

1921

The invention of stainless steel being of central importance for the cutlery industry, Karl Elsener coins the company's new name, "Victorinox" by combining his mother's name "Victoria" with "inox".

(Inox is an abbreviation of the French word "inoxydable", which means stainless).

1931

The Brown Boveri Company sets up the world's first fully electric heat treatment facility for Victorinox.

1945

The "Original Swiss Army Knife" begins its successful progression around the world and is particularly popular in US Army PX stores.

1979

On January 2, the previously solely-owned "Messerfabrik Carl Elsener" is converted to the family-owned company "Victorinox AG".

1984

The company doubles the size of its plant and office space with 810 employees generating revenue of more than CHF 80 million.

1989

Victorinox's American distribution partner enters the timepiece market in the USA under the "Swiss Army Brands, Inc." label.

1992

The company opens its own sales subsidiary in Japan. Further subsidiaries follow in subsequent years.

1999

Victorinox enters the travel gear market, issuing a manufacturing license to the American TRG Group in St. Louis.

Expanding its timepiece business, the company establishes Victorinox Watch SA in Bonfol, in Switzerland's Jura watch-making region.

2000

The Victorinox Foundation is set up. It holds 85% of the shares in Victorinox AG. A further 15% are held by the charitable Carl and Elise Elsener-Gut Foundation.

2001

Victorinox apparel is introduced in the USA.
The first Victorinox Flagship store opens its doors to the public in New York's trendy Soho district.

2002

The publicly traded US distribution partner Swiss Army Brands Inc. is privatized.
The timepiece brand Victorinox Swiss Army is launched internationally.

2003

Victorinox takes over the US-American company Wenger NA, including the fragrance label "Swiss Army Fragrance".

2005

Victorinox takes over the traditional Swiss cutlery and watch manufacturer Wenger SA in Delémont in the Swiss Jura.

2006

Victorinox Swiss Army moves to its new watch production facility in Porrentruy, in the Swiss Jura, to meet the increasing demand and to ensure high-quality timepieces.

2007

Victorinox sets up Victorinox Swiss Army Fragrance AG based at its head office. The former Wenger fragrance line is repositioned in the market and is branded with the Victorinox emblem.

2008

The company's first European Flagship store opens on London's New Bond Street.

2009

Geneva City hosts first Victorinox Flagship store in Switzerland.

125 years after its foundation, Victorinox now employs more than 1800 employees worldwide and generates revenues of around CHF 500 million.

**2011**

The success story continues, opening the Flagship store in Düsseldorf.

2012

Launch of the first Victorinox Global Brand Campaign with our customers' stories that give our brand a face. These stories tell how our products proved themselves in real life as a companion during significant, dramatic or light-hearted moments.

VICTORINOX SWISS ARMY
WORKSHOP

2012 – PORRENTRUY – SWITZERLAND

BRAND VALUES

EACH VICTORINOX SWISS ARMY TIMEPIECE EMBODIES THE SPIRIT OF THE LEGENDARY ORIGINAL SWISS ARMY KNIFE, A UNIVERSAL SYMBOL OF FUNCTIONALITY, INNOVATION, QUALITY AND ICONIC DESIGN.

FUNCTIONALITY

Our timepieces are designed to optimize their usefulness. Functionality ranges from easy-to-read dial designs to sophisticated professional functions. Every design detail is purpose-based. Functions are never add-ons or embellishments. The goal is to create watches that are timeless.

INNOVATION

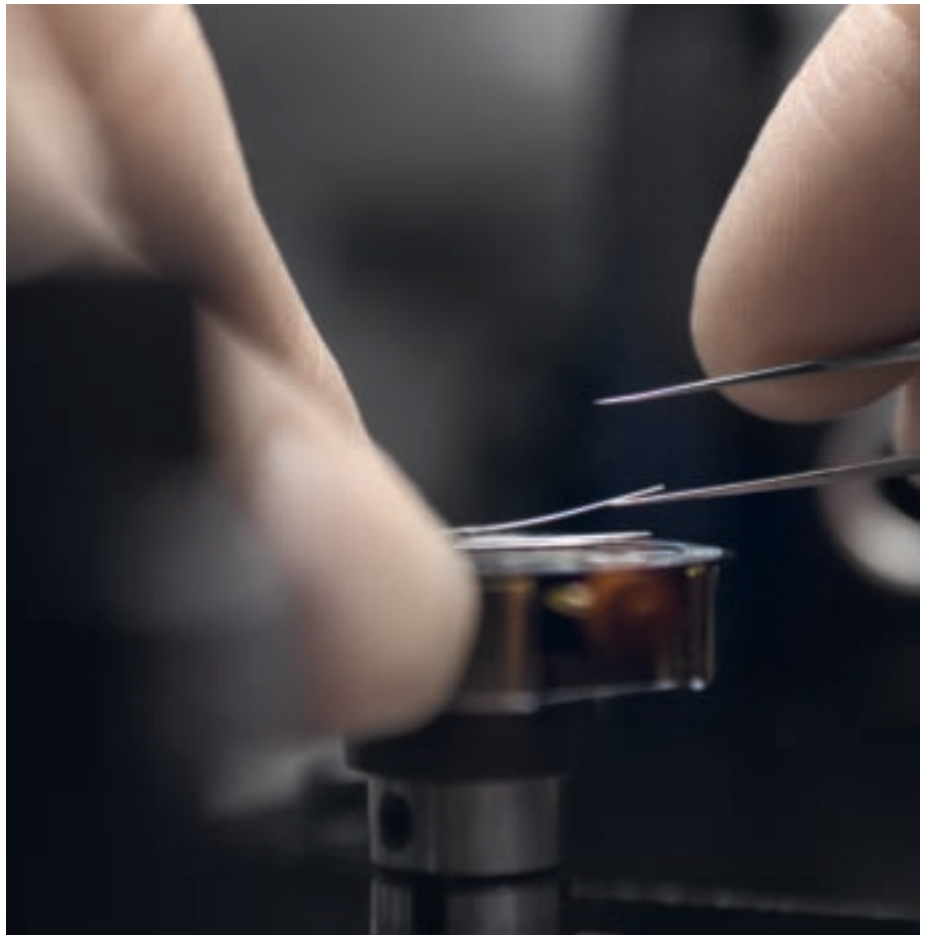

Victorinox Swiss Army constantly enhances its timepiece lines with new design elements and innovative functions while seeking creative ways of upgrading existing components to enhance their capabilities.

QUALITY

Victorinox Swiss Army timepieces are designed and manufactured with the same rigorous attention to quality as the brand's legendary Pocket Tools. They also meet the highest standards of the Swiss watchmaking industry. The quality controls and testing that every timepiece undergoes (material, movement, assembly, finishing, etc.) allow Victorinox Swiss Army to offer a 3-year limited warranty.

ICONIC DESIGN

The Original Swiss Army Knife is one of the world's most functional pieces of design. Victorinox Swiss Army timepieces share this icon's spirit and heritage. They are multi-functional precision instruments engineered to last, yet also timeless and contemporary in design.

AIRBOSS MECHANICAL

WITH SHARP AND CLEAN LINES, AND A LOOK EMPHASIZING READABILITY AND FUNCTIONALITY, THE AIRBOSS TIMEPIECE MARKS A RETURN TO FUNDAMENTAL VALUES.

AUDACIOUS IN ITS SIMPLICITY, MODERN IN ITS OUTLOOK, SWISS-MASTERED TO A VERY RELIABLE MECHANICAL MOVEMENT, THE AIRBOSS MECHANICAL IS A TOP-FLIGHT INSTRUMENT OF THE HIGHEST ORDER. THE RAISED AND LUMINESCENT ARABIC NUMERALS, THE DIAMOND-CUT STRIATIONS ON THE DIAL TRACKS GIVE AN UNEXPECTED DEEPNESS TO THE PRODUCT.

OFFICER'S

THE OFFICER'S WATCH OWES ITS NAME TO THE FIRST KNIVES THAT WERE GIVEN TO OFFICERS OF THE SWISS ARMY FROM 1891 ONWARDS. COMBINING TRADITION AND MODERNITY, ITS CURVED LINES EVOKE THE ROUNDED CONTOURS OF THE SWISS ARMY KNIFE. QUALITY, MASCULINITY, HARMONY AND REFINEMENT CHARACTERIZE THIS COLLECTION.

VICTORINOX SWISS ARMY COMBINES FOR THE VERY FIRST TIME IN AN EXCEPTIONAL SET A REINTERPRETATION OF THE FAMOUS OFFICER'S WATCH WITH THE SWISS ARMY KNIFE THAT HAS FORGED THE BRAND'S REPUTATION. THE SWISS ARMY KNIFE ACCOMPANYING THE OFFICER'S WATCH HAS BEEN SPECIALLY CREATED IN TWO EXCLUSIVE COLORS THAT HAVE NEVER BEEN PRODUCED BEFORE: MEDIUM GREY AND ANTHRACITE GREY, TO MATCH THE TIMEPIECE.

BIOLOGICAL TANNED LEATHER STRAP

HOW TO USE IT

1. DIAL ILLUMINATION MODE

One quick push of the pusher located at 8 o'clock will activate the soft blue LED light.

NOTE: During the Dial Illumination Mode, please note that the other lighting functions (2-3-4) cannot be activated.

2. EXTENDED LIGHT MODE

Two quick pushes of the pusher activates the white LED located at 12 o'clock and incorporated into the bracelet. Light will automatically deactivate after 2 minutes, or you can turn light off by pressing the pusher once.

3. SIGNAL MODE

Three quick pushes of the pusher will cause the white LED light to strobe (150 pulse/min.) for 2 minutes.

To deactivate prior 2 minutes, press pusher once.

4. INTENSE SIGNAL MODE

Holding the pusher for 5 seconds will activate an intensified LED strobe that flashes continuously. Intense signal mode is brighter than normal Signal Mode flashing (60 pulse/min.). To deactivate, press pusher for 5 seconds.

5. LOCATOR MODE

Red LED locator beacon is positioned at the 6 o'clock marker and blinks once every 10 seconds. An easy way to find your timepiece. Five pushes of the pusher will deactivate the blinking of the red LED light.

6. BATTERY END-OF-LIFE MODE (EOL)

Red LED locator beacon positioned at the 6 o'clock marker will flash 3 times every 10 seconds indicating lighting batteries should be changed. The deactivation of the Locator Mode (point 5) does not have any impact on the Battery end-of-life Mode.

ORIGINAL

LAUNCHED IN 1989, THE ORIGINAL WAS THE BRAND'S FIRST TIMEPIECE. EASY TO READ, SIMPLE AND DIRECT IN DESIGN AND SHAPE, SOLIDLY BUILT ACCORDING TO THE MOST RIGOROUS QUALITY STANDARDS YET ACCESSIBLY PRICED, THIS TIMEPIECE HAS, IN JUST OVER TWENTY YEARS, BECOME A VICTORINOX SWISS ARMY ICON.

82 – QUALITY

VICTORINOX
SWISS ARMY

MATERIALS & COMPONENTS

VICTORINOX SWISS ARMY SOURCES THE BEST MATERIALS FOR ITS SWISS-MADE TIMEPIECES. ROBUSTNESS, DURABILITY AND QUALITY ARE THE KEY REQUISITES.

MOVEMENTS

Victorinox Swiss Army equips its timepieces with Swiss-made precision mechanical and quartz movements. These are sourced from the best manufacturers in Switzerland:

ETA – Over 200 years of experience in quality movement manufacturing. Equips mainly our mechanical timepieces (Valjoux, Valgranges, Unitas) and some of our quartz chronographs;

RONDA – Progressive new movement features and responsive to customer needs. Used mainly in our 3-hand quartz watches.

Exclusive mechanisms are also developed with renowned partners for special mechanical timepieces. In addition Victorinox Swiss Army integrates exclusive Swiss-developed and Swiss-made electronic modules to power timepieces like the Night Vision.

STAINLESS STEEL

The 316L stainless steel alloy used in Victorinox Swiss Army cases and bracelets has strong anti-magnetic properties and is optimized for toughness and corrosion resistance. It is also a good choice for consumers allergic to nickel.

TITANIUM

Victorinox Swiss Army integrates this metal to some of its sports timepieces, as it is as strong as steel but 45% lighter and highly resistant to corrosion. The high tensile strength to density ratio makes it the ideal material for active lifestyles.

PVD (PHYSICAL VAPOR DEPOSITION)

Victorinox Swiss Army uses PVD coatings and was one of the first watchmaking brands to apply the “Black Ice” PVD treatment color, setting a trend in the industry since then.

PVD, a high-performance pollution-free and non-allergenic technology also used in the aeronautic industry, is widely used in watchmaking. The process involves putting a fine titanium coating on stainless steel by condensing a metal vapor in a partial vacuum, not through electrolytic or chemical processes.

Victorinox Swiss Army also employs a special process for its timepieces with gold accents: a thin layer of gold powder is added after treating the surface with PVD. This process provides a longer-lasting finish versus conventional plating.

SAPPHIRE VS MINERAL CRYSTALS

Ninety-five percent of Victorinox Swiss Army watches are fitted with a scratch-resistant crystal that has been cut from a polished slice of solid sapphire. Each has a triple-coated anti-reflective treatment on the internal side for better legibility. On the other hand some timepieces are equipped with a mineral glass which offers a better shock-resistance.

LUMINESCENCE

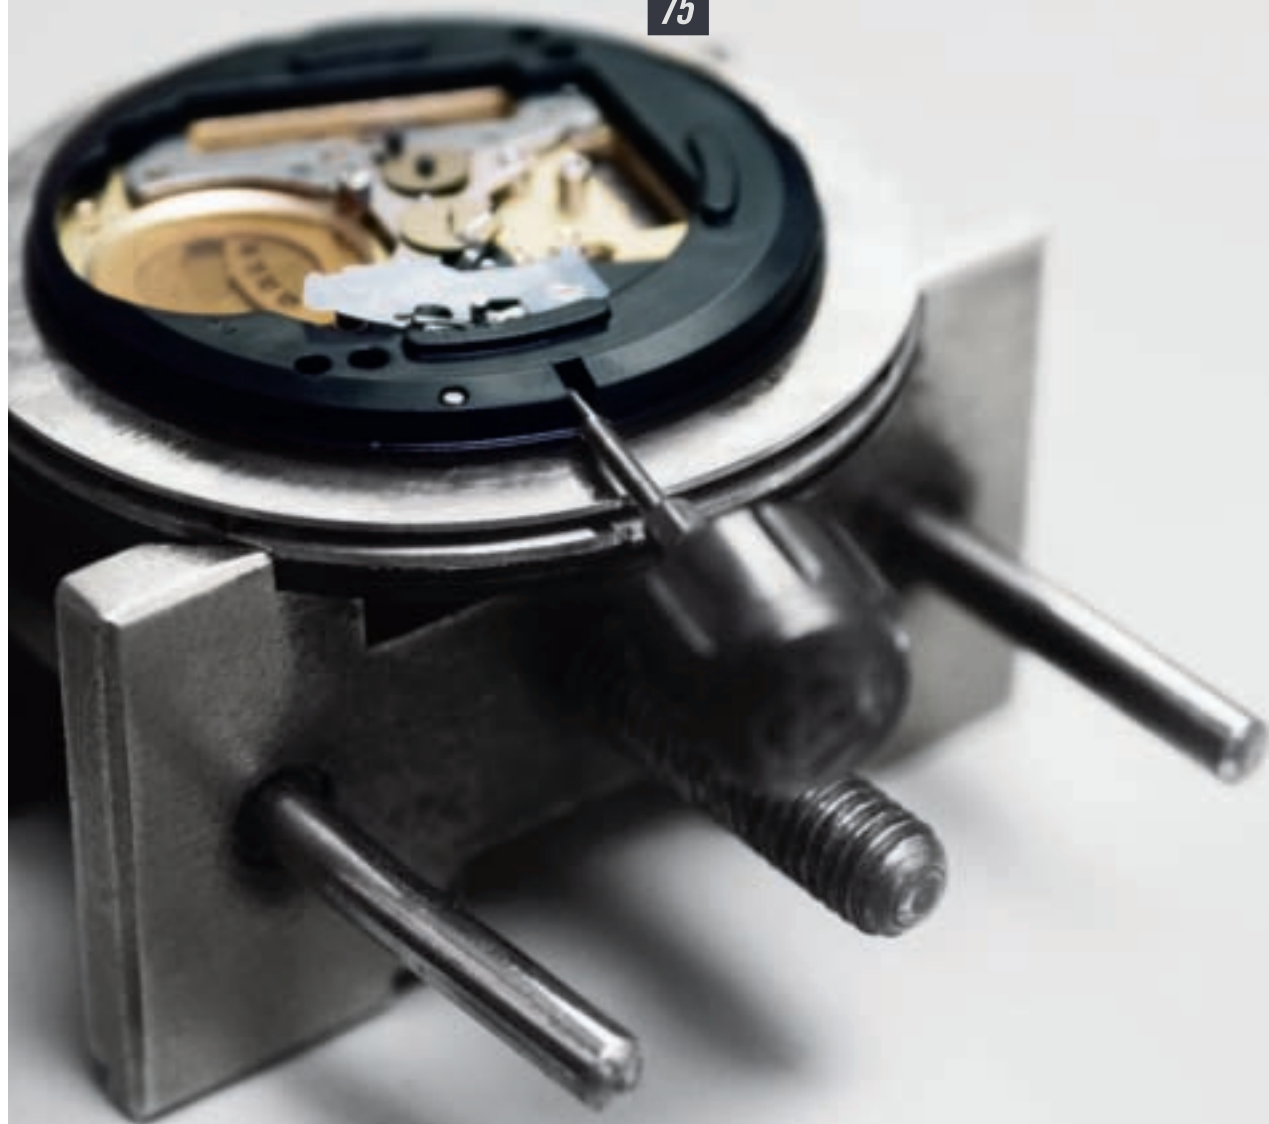

This technology, branded under the name Super-Luminova®, offers brightness in low-light conditions, thanks to a non-radioactive and non-toxic material like the tritium previously employed in the industry. Victorinox Swiss Army uses Super-Luminova® for its highly functional attributes. It is applied on watch parts such as hands, numerals, bezel markers, etc.

MOTHER-OF-PEARL

Resilient, and iridescent, mother-of-pearl is integrated in some Victorinox Swiss Army dial designs. It is produced inside the shells of certain mollusk shells. This is why each dial made of mother-of-pearl is unique.

LEATHER

All Victorinox Swiss Army leather straps are specially cut, stitched and padded by expert craftspeople. Various ways of tanning provide different touch and feel for the straps made of cow or calf leather. For some models Victorinox Swiss Army uses biological tanned leather straps giving a soft touch and upgraded comfort to its owner. We also make sure that the leather of all our straps do not come from any endangered species. It is always important to remember that colors and suppleness of leather are subject to change with time and exposure to external factors. Daily showers or swims are not recommended. If your consumers live a very active lifestyle, especially one involving frequent exposure to salt water and heavy perspiration, we recommend a steel bracelet or rubber strap.

RUBBER

Victorinox Swiss Army uses genuine high-grade rubber for its straps (a natural material and extremely comfortable). The rubber is silky finished and easy to maintain with the proper cleaning.

DIAMONDS

For Victorinox Swiss Army jewelry models, diamonds are carefully selected and matched not just according to carat value but also to cut, color and clarity. To this famous “4C” approach of characterizing diamonds — an industry standard in the field of gemology for more than 100 years — Victorinox Swiss Army adds a fifth C: “cost”. The goal is to pass on to our customers the best quality at the best price. Equally important is the diamond’s history: all diamonds are purchased from legitimate sources not involved in funding conflict and in compliance with United Nations resolutions. We guarantee that these diamonds are conflict free.

VICTORINOX SWISS ARMY FINISHING

Depending on the timepiece and the aesthetic effect desired, Victorinox Swiss Army utilizes polished, brushed, satin, or grinded finishes. Polishing gives sparkle and shine to the metal, which is further enhanced by a final hand buffing.

Surfaces catch the light and the watch’s contours are highlighted. Fine brushing and satin produce a silky finish with subtle tones. It is ideal for watches that will be worn everyday as they are less susceptible to visible scratches.

Even less prone to scratches, grinding finishes are mainly used for elite timepieces in the industry. For Victorinox Swiss Army, this is mainly done for timepieces in the Professional line.

On some models Victorinox Swiss Army stainless steel is enhanced with highly aesthetic finishing such as the signature Black Ice PVD treatment.

Victorinox Swiss Army applies guilloché, azurage and other highly aesthetic finishing on dials (applied numbers, diamond cut, angled flange, levels, etc.). Moreover, movements and casebacks are either specially decorated or engraved individually.

BATTERIES

In compliance with global regulations and standards, Victorinox Swiss Army equips its quartz timepieces with mercury-free batteries. This is a positive step towards environmental sustainability with no effect on the watch precision and its efficiency.

27 jewels

13¹/₄ lines

Ø 30 mm

Designed in 1973 in the Vallée de Joux and introduced in 1974, the Valjoux 7750 has become a reference for its reliability, its robustness, its high precision and also for its power. The movement uses a self-winding module attached to the top of the movement, winding in one direction by means of a single double-click wheel.

RUGGEDNESS THANKS TO THE CONCEPT OF COULISSE-LEVER DESIGN

Like many contemporary chronographs, the Valjoux 7750 dispenses with the traditional column wheel for switching functions. Instead a heart piece limiter is used to coordinate starting, stopping, and reset functions, usually by means of two buttons in contemporary designs.

The 7750 has proved itself a reliable and durable work-horse at a reasonable price. Without the 7750, mechanical chronographs might be known only to the buyers of high-luxury watches.

The Alpina Power Gauge Limited Edition is equipped with a special version of the 7750, including an additional mechanism able to indicate the power reserve on a sectorial subdial.

VALJOUX 7750 VERSUS 7753

A chronograph equipped with a 7750 movement is highly recognizable by the position of the counters: 6-9-12. This means that the 30-minute counter is always at 12 o'clock and the 12-hour counter at 6 o'clock. The small second is located at 9 o'clock.

To have access to the more classical position of the counters, a mechanism has been added to the 7750 to move the minutes counter to 3 instead of

12 o'clock, with the objective of having a symmetric dial: this evolution of the Valjoux is the 7753 variant.

The 7753 is having in addition a small corrector at 10 o'clock, allowing the direct setting of the date, without having to use the crown.

ETA UNITAS 6498-1 / 6498-2

18'000 vibrations/hour (2.5 Hz)

17 jewels

16^{1/2} lines

Ø 36.60 mm

The Unitas movements have been designed in the 1950s by a watch company named Manufacture Auguste Raymond in the small town of Tramelan in the center of the Swiss Jura region. Among them are the Unitas 6497 and 6498 pocket watch movements which were regarded as some of the best pocket watch mechanisms ever designed for their ruggedness and accuracy.

The tools and related equipment for the production of the Unitas 6497 and 6498 pocket watch movements were acquired by the Swiss company Ébauches S.A (former name of ETA in the 70's). Despite this acquisition, the name of the Unitas calibers remained unchanged, just like other calibers acquired by ETA, such as the Valjoux.

Unitas is experiencing resurgence today as a movement for wristwatches. Both the Unitas 6497 and 6498 movements remain the premier movements for mechanical pocket watches. Its manual winding is a fine feature for those appreciating the very traditional watchmaking.

FUNCTIONS

WHAT IS THE DIFFERENCE BETWEEN A COUNT-UP AND A COUNTDOWN FUNCTION?

COUNT-UP

When a scale, on a bezel for example, is going from 5 to 60 (clockwise incrementation), we may use the bezel as a counter, to count up to 60 minutes. To do so, simply turn counterclockwise the bezel to align the triangle of the scale on the minutes hand of the watch. To know how many minutes have been passing by, simply look the number on the bezel that is pointed by the minutes hand.

COUNTDOWN

When the scale on a bezel starts at 55 on the right (counterclockwise incrementation), we may use the bezel as a timer, to count down up to 60 minutes. To do so, simply turn clockwise the bezel to align the number of minutes to be counted down on the minutes hand of the watch. To know how many minutes are left to be counted down, simply look the number on the bezel that is pointed by the minutes hand. When the minutes hand reaches the triangle on the bezel, the countdown is finished.

TACHYMETER

The tachymeter allows you to measure the average speed of an object moving at constant speed. Start the chronograph and stop it after a certain distance covered (1 km). The chronograph hand indicates a figure on the tachymeter scale corresponding to the speed in km/h.

TELEMETER

The telemeter is an instrument for measuring distances. Distances can be read off on the basis of the speed of sound through the air. The time that elapses between the flash of an explosion (lightning) and the hearing of the noise makes it possible to read off on the dial the distance between the observer and the position of the flash.

QUALITY

VICTORINOX SWISS ARMY TIMEPIECES ARE COVERED BY A 3-YEAR LIMITED WARRANTY, WHICH IS A LONGER PERIOD OF COVERAGE THAN WHAT MANY TOP WATCH BRANDS OFFER.

THE REASON WE CAN OFFER THIS EXTENDED WARRANTY IS BECAUSE OF THE CONFIDENCE WE HAVE IN OUR QUALITY TEAM AND THE PROCESSES THAT EXIST. VICTORINOX SWISS ARMY TIMEPIECES GO THROUGH RIGOROUS TESTING AND SEVERAL QUALITY CONTROLS BEFORE BEING DISTRIBUTED.

THE QUALITY TEAM AND ITS EQUIPMENT USED FULLY COMPLY WITH EUROPEAN ISO STANDARDS AND FEDERATION OF THE SWISS WATCH INDUSTRY STANDARDS (NIHS). IT ALSO HAS ITS OWN STANDARDS AND INTERNAL TESTS. IN EACH PRODUCTION PHASE, QUALITY “FILTERS” — SPECIFIC MEMBERS OF THE QUALITY TEAM — CONTROL EACH STEP. THEIR EXTENSIVE CERTIFICATION CONTROLS CONTINUE TO MONITOR DELIVERY. VICTORINOX SWISS ARMY ALSO CERTIFIES EACH COMPONENT BROUGHT IN FROM OUTSIDE SUPPLIERS. THE VICTORINOX SWISS ARMY QUALITY TEAM CONDUCTS MORE THAN 50 TESTS BEFORE CERTIFYING A WATCH. HERE IS A LIST OF THE MOST IMPORTANT TESTS VICTORINOX SWISS ARMY TIMEPIECES UNDERGO:

CONFORMITY

Every component coming into our production facility in Porrentruy in the Swiss Jura is checked to ensure its dimensions, aesthetics, quality and interchangeability. This process is ensured thanks to an internal Development Team that engineers the various components. All this occurs even before their production, therefore allowing integrated process from the start.

MECHANICAL MOVEMENT

A mechanical movement undergoes several stresses in its life. To ensure it will remain functional and precise for as long as possible, Victorinox Swiss Army simulates watch wearing in its own quality office for every single manual and self-winding mechanism.

WATER RESISTANCE

Victorinox Swiss Army watch cases are hermetically sealed using high-grade rubber gaskets and screwed-in case-backs to ensure that no moisture or dust comes in contact with the movement inside. The Quality Team carries out individual and real-time water resistance and water-pressure tests to 100 meters on most of its watches, which is the brand's water resistance standard. Special 500-meter water resistance testing equipment is used for the famous Dive Master 500 watches.

TEMPERATURE RESISTANCE

Heat chamber and humidity tests are performed on Victorinox Swiss Army watches to ensure perfect operation in the tropics. It also subjects each to negative temperatures, to be sure that the watch, especially the mechanism, can withstand the climatic conditions encountered during winter sports.

CORROSION RESISTANCE

Perspiration, chlorine, soap, seawater, air pollution — these and other environmental elements can damage timepiece components and materials. Victorinox Swiss Army performs a number of tests to ensure parts do not wear or lose mobility because of exposure to corrosive elements. Neutrality tests are also done on parts coming in contact with the skin, including cases, stainless steel bracelets, leather straps, etc.

UV RESISTANCE

Intense light can age many materials used in timepieces, such as coatings, plastics, rubber and leather. Rigorous testing is done to ensure the durability of these materials. For a material to be certified by the Quality Team, no signs of aging must occur during testing under intense light.

TRACTION/TORSION RESISTANCE

The buckle on a leather strap and the clasp on steel bracelet undergo constant use during the life of a timepiece. Victorinox Swiss Army submits complete timepieces to traction and torsion tests while special attention is paid to attachment pins to ensure that accidental snagging will not bend or weaken them.

VIBRATION RESISTANCE

Everyday wrist movements — and sporting activities like biking, jogging, riding, and skiing — can affect the performance, quality and accuracy of a watch. To prevent this, special machines put Victorinox Swiss Army timepieces through more severe vibration than it would ever experience on even the most active wrist. If the watch or its components do not withstand the intense ordeal, the watch will not pass certification.

SHOCK RESISTANCE

A number of severe shock tests are executed on Victorinox Swiss Army watches. Heavy impacts are reproduced in the lab — the equivalent of severe impact with a wall, for example. The appropriate instruments later check that no mechanical damage occurred during these tests.

AGE RESISTANCE

Victorinox Swiss Army watches are function-tested to simulate the aging process — moving parts such as push-buttons, crowns and bezels are turned and manipulated in a manner that reflects the equivalent of several years of normal use.

ABRASION RESISTANCE

The Quality Team does intensive abrasion studies, especially on its cases, bracelets and straps, to ensure that the timepieces can be worn in all situations and not wear out during its active life.

VISUAL AND MANUAL TESTING

In addition to this testing process, all timepieces are visually checked by a member of the Quality Team between each manufacturing step ensuring overall quality based on our own Victorinox Swiss Army standards. If a timepiece does not pass inspection, it is checked and repaired. It can only go back to the production phase if it has passed the quality check.

CUSTOMER SERVICE

EVERY ONE OF OUR 200 WORLDWIDE CUSTOMER SERVICE STAFF AND MASTER WATCHMAKERS AT VICTORINOX SWISS ARMY CUSTOMER SERVICE IS READY TO ENSURE THAT YOUR TIMEPIECE GIVES FULL SATISFACTION THROUGHOUT ITS LIFE.

TO KEEP YOUR WATCH LOOKING AT ITS BEST AND WORKING PERFECTLY REQUIRES REGULAR SERVICING. ONLY AUTHORIZED VICTORINOX SWISS ARMY SERVICE CENTERS ARE ABLE TO ENSURE THE WORK MEETS OUR STANDARDS OF EXCELLENCE.

- Each watch sent to an authorized Victorinox Swiss Army Service Center is handled by a professional watchmaker.
- A series of tests is carried out and a detailed cost estimate is prepared, free of charge (for watches out of the warranty period) which is submitted to you before proceeding to any repair.
- Once you have accepted the cost estimate, our watchmakers will carry out all the necessary procedures, including the replacement of all worn or defective components. They have at their disposal a stock of several thousands of spare parts.
- After each service, your watch will be returned to you with a warranty of one year on the work performed.

OUR MAINTENANCE SERVICES

TAKING INTO ACCOUNT THAT A WATCH RUNS 24 HOURS A DAY, 7 DAYS A WEEK WITH MINIATURIZED COMPONENTS AND MECHANISMS UNDER VARIOUS CONDITIONS: DAILY LIFE BUT ALSO SKIING, WATERSPORTS, SUDDEN VARIATIONS OF TEMPERATURES..., YOUR TIMEPIECE REQUIRES CARE AND MAINTENANCE TO ENSURE ITS RELIABILITY AND ITS "COMPANION FOR LIFE" PROMISE.

3 types of services are available at any of our authorized VSA Service Centers :

Every year, especially before leaving for holidays (period at which your watch is particularly strained), a water-resistance test is strongly recommended

Every 2 years : we recommend a maintenance service. It will ensure that :

- your watch is completely water-resistant (dismantling, replacing all the gaskets, cleaning the case, etc...)
- the movement works correctly (changing the battery in a quartz watch, checking and adjusting a mechanical movement)

Every 4 to 6 years : Depending on the model of your watch, your personal use and the local climate, we recommend a complete overhaul.

- A complete overhaul of the movement (dismantling, checking the functions, replacing worn components, etc...)
- A full check of water-resistance, accuracy and functions

Additionally, an optional polishing service can also be offered. This service is only available on steel products and aims to restore the original appearance of your timepiece as best possible subject to the depth of scratches.

OUR ADVICE FOR TAKING CARE OF YOUR VICTORINOX SWISS ARMY TIMEPIECE

LIKE ALL QUALITY PRODUCTS, VICTORINOX SWISS ARMY TIMEPIECES REQUIRE ATTENTION AND CARE, FOLLOWING A FEW BASIC RECOMMENDATIONS THAT WILL PROTECT YOUR WATCH OVER TIME.

WATER RESISTANCE

To prevent any infiltration of water or dust, all watches (quartz or automatic) should have their water-resistance checked every year by an authorized VSA Service Center. We recommend to proceed with this test ideally before summertime or before going on vacation, as your watch is particularly exposed at that time to water pressure and strong variations of temperatures.

MECHANICAL MOVEMENTS

Automatic or hand wound movement is a miniaturized engine running 24 hours a day, 7 days a week. To sustain its accuracy (between -2 and +20 seconds per day), it needs regular maintenance and checking. We recommend that customers have the movement serviced every 2 years.

CONDENSATION

a sudden change of temperature may cause condensation to appear under the crystal. This doesn't affect the watch's functions and will soon disappear on its own. Nevertheless, it indicates a water-resistance weakness, our recommendation is to consult an authorized VSA Service Center.

CLEANING & WATER RESISTANCE

to preserve the attractive appearance of the watch, regularly clean the case and the steel or gold bracelet in slightly soapy water, then rinse in fresh water and dry with a soft cloth. Leather is a noble, living material. When it gets wet, it tends to lose its suppleness and color. If possible, avoid frequent immersion in water and daily showers. When the watch has been in salt water, it should be carefully rinsed with clear water and dried as soon as possible.

SHOCKS

Avoid impact, drops, and repeated friction that could abrade the metal and affect the watch mechanism. So we recommend you take off your watch while playing tennis, squash or golf. Also avoid contact with chemical products, exposure to high temperatures and strong magnetic fields.
